

JANOME

Accessory of the Month

April 2019

Applique Foot

This presser foot is shorter than most for easier manoeuvring around curves and corners when sewing applique pieces. Made of clear plastic for easier viewing as you sew. The foot also has markings for you to line up the exact position that your needle will start in depending on the stitch selected. As the foot hooks onto the back of the shank then clips down it means that the foot won't move on you while you are working your way around applique pieces.

Common Applique Stitches

This Accessory of the Month has a bonus project for you to make using the Applique Foot. Press the link to download the project .
